

► PIVOT HT0707

The HT0707 offset pivot hinge is distinguished by its bold geometric form. The enlarged pivot knuckle reinterprets antique European designs. For doors 8' tall and over, an additional intermediate hinge set is often recommended to prevent door warping. Required information to specify offset pivot hinges includes door thickness, weight, height, as well as the door-jamb detail.

Contact H. Theophile for a complete selection of offset pivot hinge configurations, several of which are shown here.
