

► CATCH HT7015

The HT7015 magnetic catches are alternatives to traditional roller latches. These do not require a strike and are inserted opposite each other in the door jamb and into the top of the door itself. The jamb side can be covered with a wood plug. Magnetic catches cannot be installed in direct face-to-face contact.

Manufactured from aluminum with a brass cap, each tube can be filled with different numbers of magnets for adjustability in strength. Provided 2 per set.
